It is remarkable that Ulcers & swellings  
occur in the throat in the Children more than  
in any other part of the body. This fact  
favours the ~~idea~~ opinion of Mr. Webster.

The Ulcerous sore throat exists in three forms. These are

1 The Ulcerous Malignant sore throat.

2 The Ulcerous Scarletina anginosa, or what is called the Scarlet fever sore throat, and

3 The Ulcerous of Dr. J. S. Dippot, or the Angina suppeditativa of Dr. Bard. —

I of the malignant sore throat. This form of disease made its appearance soon after the plague disappeared in Europe, from which Mr. Webster has supposed it to be an evanescent form of that disease. It resembles it in appearing in middle latitudes, in the autumnal months - in having eruptions at night, and in being attended with bilious discharges and in terminating in from three to five days. It is a very fatal disease often destroying thousands in a city or country in a few months. I have once seen

it protracted it. The pulse is ~~too~~ most commonly typhus, but we now and then find it typhoid, and in a few cases I have known it to synoecia & synochus fortis in its first stage.

2

it epidemie in this city ~~does~~ about the  
year 1763. It prevailed chiefly among children,  
but I well recollect some adults were affected  
with it. Girls are more subject to it than  
boys, women than men, and the weak,  
more than the robust. I have known it  
to appear occasionally in sporadic cases  
and then suddenly disappear for several  
years. The same remark applies to all  
other malignant diseases. Their short  
and occasional visits seem intended to  
exhibit a renewal of their claim upon  
human life but lest in the lapse of 20  
or 30 years they should lose their power  
over it. the system is generally very much  
more for a particular description of this  
disease I refer you to Dr. Folkegill, Dr.  
Johnson's and Dr. Cullen's histories of it.  
It has been supposed to spread by conta-  
gion, but if it be a relit or modification

of the plague, its remote cause must be sought for in the atmosphere. In cases where a great deal of putrid matter is <sup>formed or</sup> excreted from Ulcers in the throat, it is probable the breath may convey the disease. In this case it is propagated by the contagion of excretion only, or perhaps it is excited by an active Odor awakening dormant Miasma in a predisposed System. The matter discharged from the Ulcers in this disease is so acrid as to inflame the nose & mouth in children and even to excoriate the fingers of a physician. No wonder therefore the odor from this matter excites the disease in ~~a predisposed~~ a habit predisposed to it by being impregnated with its Miasma. In favor of its spreading by a specific contagion, it is said to be taken but once, but this may be accounted for by children being the principal subjects of it, for as it appears

but

ours  
fir  
in  
S

but even in 20<sup>4</sup> or 30 years, the children  
who have had it by becoming adults within  
that time lose their predisposition to it from  
age, and not from a previous attack of  
it.

Its premonitory symptoms are languor,  
or ~~or~~ unusual sleepiness, watery eyes,  
a stiff neck, a fetid taste & smell, and the  
common signs of an approaching fever.  
In this forewarning state of the disease, an  
emetic often strangles the it in a few  
hours. My preceptor in medicine employed  
the Sulphate of mercury that is Tritheth  
mineral in doses from 1 to 3 grains for  
this purpose, and with the happiest ef-  
fects. None died who took it on the first  
day. It seems to salivate not only the  
throat, but the stomach, and the whole  
intestinal canal. ~~the~~ Mobility of the stools is  
~~spoken~~ this disease is after the disease is

formed the remedies should be

1 Bleeding if the pulse be synœcha or synœchus  
fortis. Be not deterred by what English ~~writers~~  
physicians have written against this  
remedy from using it. Recollect the difference  
of our climates, aliments & habits of  
men bled four times in a synœcha case of  
this disease and thereby <sup>be</sup> saved my patient.

2 Emetics. These should be given in those  
cases where the pulse forbids bleeding but  
where the system requires some depletion.  
They should be repeated daily until the  
pulse is reduced to the typhus point. They  
cleanse the throat, discharge bile - irritate  
excretion, and prepare the way for the  
exhibition of stimulating remedies. The  
tincture of mercury should be preferred to  
all other emetics.

✓ pepper has been given with success in this disease in cases in which the stomach has rejected the bark, and even when the pulse has forbidden it. It is not only a ~~safe~~ <sup>safe</sup> ~~stimulant~~ <sup>stimulant</sup>, but it cleans the throat in its passage into the stomach. The following is the formula in which it has been used in the West Indies.

Three table spoonful of ~~the~~ the Cayenne pepper - two of common salt - boiling water ~~1/2~~ - when cold add to it ~~1/2~~ of vinegar, and give to an Adult a table spoonful every hour first shaking the vessel that contains them.

6

3 gentle purges. The bowels are generally  
inert in this disease, and disposed to a  
diarrhea for which reason active purges  
should never be given. Dr. Sothingill advises  
to give them only on the first day of the  
disease. A diarrhea after this should be restrain-  
ed, for it not only weakens the patient,  
but checks a salutary efflorescence upon the  
skin.

4 Bark, wine & Laudanum. These remedies  
should be given in the most liberal quantities  
as soon as the pulse is reduced to the ty-  
phus state by the remedies that have been  
mentioned. They should be given from  
the beginning, and without any previous  
evacuations provided the pulse be typhus  
on the first day of the disease. Cayenne  
5 mercury. Dr. Douglas of Boston & after  
him Dr. Ogden of Long Island introduced  
this medicine into practice in the  
malignant

in the throat. It should always be combined, <sup>it</sup> with Theriaca to prevent its passing out of the system thro' the bowels. The Theriaca was moreover a useful addition to the cords also required by the disease. The mercury seldom failed of curing when it affected the throat where it produced a far less destructive action than the disease.

6 Fumigations of this a funnel of myrtle built in vinegar conveyed to the throat, also ~~and~~ gently stimulating Gargles particularly sage tea aniseed with the mercurial and made pleasant with sugar are very useful. When they are ineffectual to cleanse the throat, a rag tied round a stick should be employed for that purpose. The cords, if suffered to remain in the throat, by reacting, increases the disease.

<sup>Thoughts</sup>

neck and throat, the <sup>8</sup> up the danger. Sweating is always favourable. The danger does not appear to be limited by the extent of the eruption upon the skin.

The skin and even the nails sometimes come of after a recovery from this disease. It departs now & then follows it, but it is most commonly of a transient nature except when it arises from the destruction of the <sup>Drum</sup> ~~ossicles~~ of the ear.

The disease has been prevented by taking gentle purges, and by saturating the system with mercury.

The Scarbitina Anginosa, -

is a disease of less ~~severity~~<sup>violence</sup> than the malignant sore throat, and attended with much less mortality. It is generally attended with a purring of bill, a shining efflorescence upon the skin, and with Ulcers in the throat - but Dr. Dyersham describes it as appearing ~~in some instances~~ without a disease of any kind in the throat. I have one, & but one once, it in this form. It was while I was a student of medicine. ~~that~~ I well recollect the ~~hand~~ article peeling off so completely from the hand & arm of a young little girl that it resembled an inflated glove. The heat of the skin ~~describ~~ in days is greater in this state of fever than <sup>in</sup> any other. It sometimes rises to  $112^{\circ}$ . <sup>I have seen several</sup> ~~cases in which it was~~ <sup>cases in which it was</sup> ~~seen~~ <sup>seen</sup> ~~in~~

V It sometimes kills in six hours, but  
it is remarkable while it now & then  
carries off two or three in a family, hun-  
-dreds recover from it without an alar-  
-ming dysentery. Thus it exists as Dr  
-Hoffland happily expresses it from a  
"Blea bite to a plague". Here you see the  
Unity of Epidemics. The same thing occur-  
-red in the bilious fever of 1802 in this  
city. While a few died of its most vir-  
-gent state, with what is called yellow  
fever, hundreds recovered so in whom  
it appeared in a mild remitting, and  
intermitting form.

with a yellow skin. Dr. Miller tells us it sometimes ~~terminates~~<sup>fatally</sup> in phrenitis & mania in which cases all its ordinary symptoms disappear. Cases of it are often It is said to be contagious, but Dr. Lebeden & Dr. Miller say it may be taken more than once. My observation accord with theirs. I have seen it several times in the same family in this city. That it is an atmospheric disease has been satisfactorily proved in a letter from Dr. Collier to Dr. Fothergill in which he says it appeared when there was not the least probability of its being imported. When the excretions from the throat are very offensive they, probably, excite dormant miasma, and hence the reason why it often spreads through a whole family.

It terminates in anasarca <sup>very often</sup> in the lower extremities, and now and then in phrenitis.

and varia also in abscesses in the neck  
and in obstinate tumors in the submaxillary  
glands.

The premonitory symptoms of this  
disease are nearly the same, as of the  
malignant sore throat. An emetic has  
the same good effect in preventing a com-  
plete attack of the disease. When it is for-  
med, the Remedies should be

I Bleeding when the pulse is full or tense. I  
have repeatedly employed it and at first  
in opposition to the prejudices & clamors  
of too many brethren who regulated their  
practice by English books. I do not recollect

)  
i.e.

of the Skin with cold Water. Dr  
Turner ventured upon this remedy  
in this Disease with a great mass of  
theoretical prejudice against it, but with  
the happiest effects. I have imitated his  
practice and with success. I was much  
struck in observing the redness of the  
skin to be increased, instead of being  
eased by the cold water. Doubtless the heat  
in this fever is greater than any other &  
the water comes of this heat from the body.

that I ever lost a patient ~~indeed~~ for whom I prescribed this remedy. This success was perhaps owing to the disease being a safe one when accompanied with inflam<sup>ation</sup>.  
Symptoms.

2 Remedies. The sulphate of Lime should be preferred for this purpose. They should be repeated two or three times in the course of the disease.

3 Purges. They should be of a bland kind.  
4 ~~Cold water~~ applied to the skin ablation  
5 Blisters. They should be applied first to the lower extremities when the disease attacks the head and breast.

6 Mercury so ~~soon~~ combined as to dis-  
pose it to act upon the throat.

for the malignant sore throat, and

8 Bark, Wine and Laudanum. I have  
seldom found these medicines necessary,  
- the pulse seldom descending to the typhus  
state in which case only they are indicated.  
I think I have known them hurtful in  
every other state of the pulse.

Signs of a favourable issue of this disease  
are 1 a dry and general red color of the skin.  
none died of this fever when it appeared <sup>in other cities</sup> without  
- out any affection in the throat.  
2 swellings of the lower limbs are favourable.

Unfavourable signs are

- 1 great restlessness, or jaettation of the body from  
one part of the ~~body~~ <sup>feet</sup> to another.
- 2 Colles ~~feet~~ <sup>feet</sup> obstinately cold.
- 3 Abscesses in the neck. I lost two patients  
in whom this symptom occurred.

4 a yellow color <sup>14</sup> of the Skin. I never  
saw a recovery with this symptom.  
5 Insensibility of the stomach discover-  
ed by Fumets making no impression  
upon it. Dr. Willan says he never saw  
a recovery where this was the case.

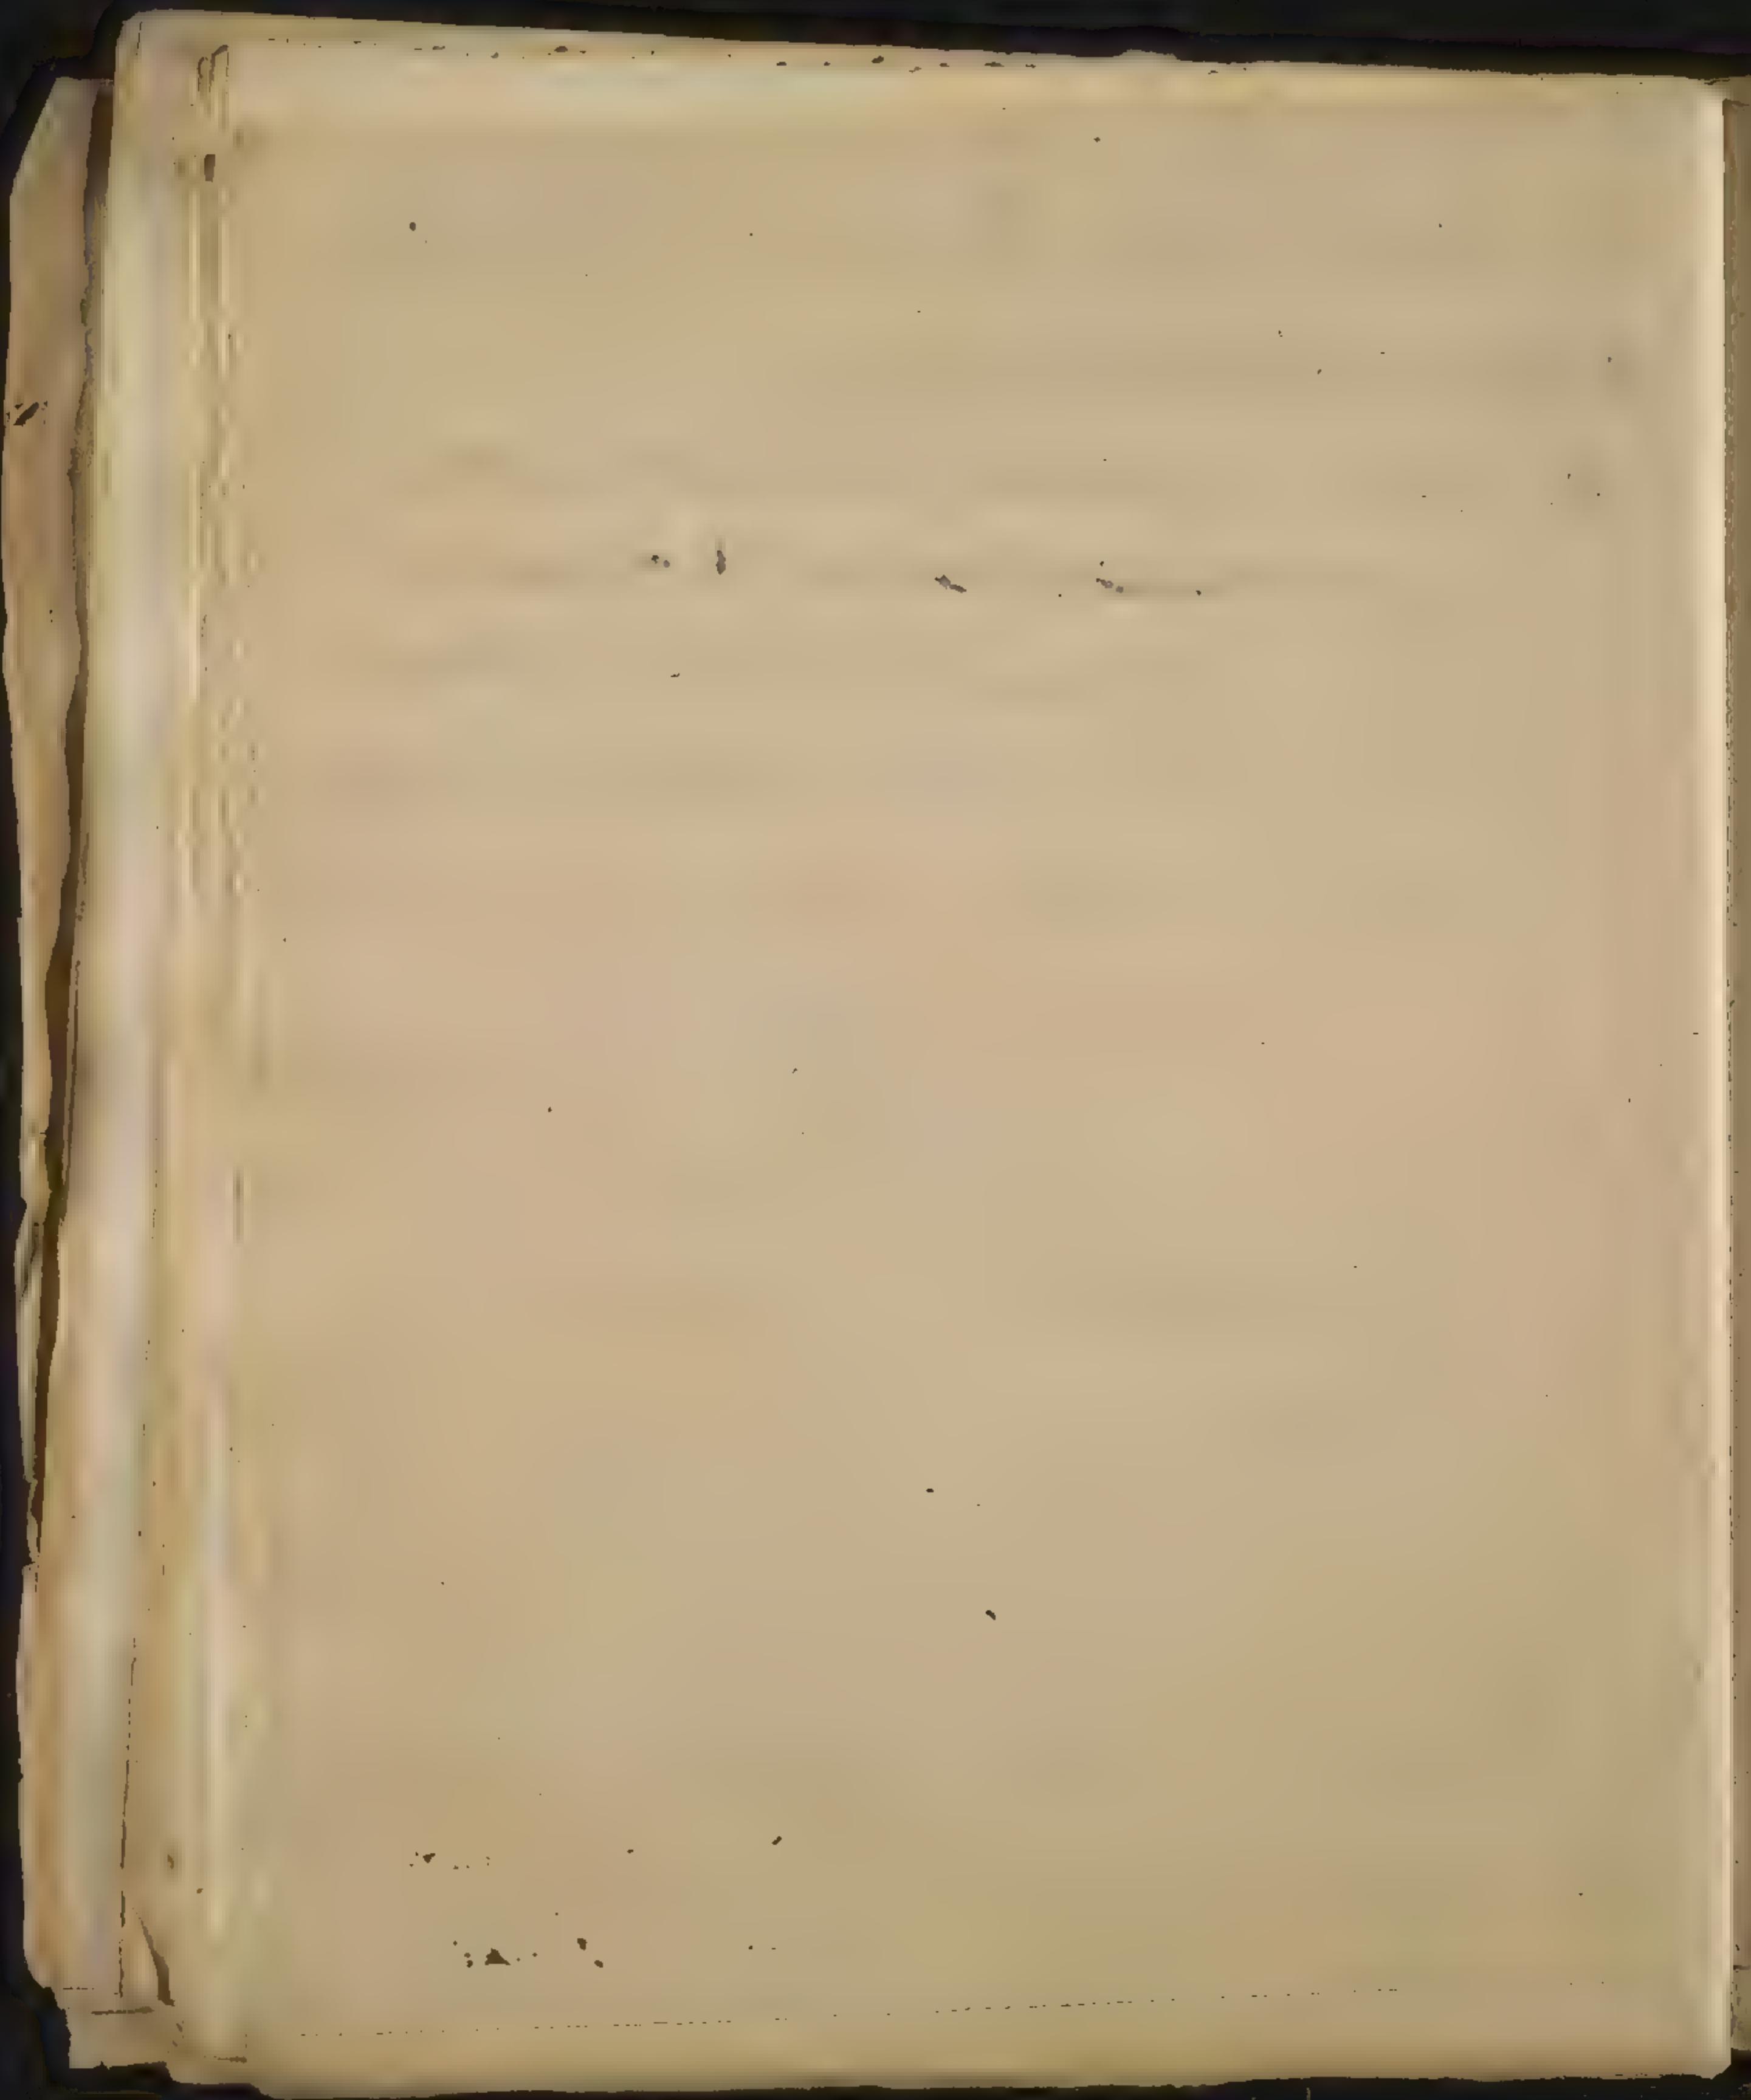

The swellings of the limbs sometimes  
require the aid of medicine. They generally  
yield to purges, and small doses of nitro.  
The means of preventing this disease  
are the same as those for preventing the  
 malignant sore throat. Dr. Sims says <sup>gentle</sup> purges  
effectually prevent it in persons  
who are exposed to it. —

For a more minute account of  
this disease I refer you to Dr. Willan's  
upon it, and to Dr. Cullen's first lines.

of the Oreilles of Dr Tipot, or  
Angina Suppurativa of Dr Bard.

This form of Ulcerous <sup>Sorethroat</sup> is accurately de-  
-scribed by Dr Bard ~~and~~ Dr Tipot in  
his Advice to the people, and by Dr Bard in  
the first Volume of the philosophical  
transactions. Its symptoms are nearly  
the same as the malignant sore throat,  
but its seat is a little different. It affects  
the Trachea and Bronchis chiefly <sup>with Ulcers</sup>, and  
when fatal <sup>sometimes</sup> leaves a membrane in them  
similar to that which I shall presently  
say takes place in some of the fatal cases  
of lymphatic trachitis. Patients die suf-  
focated with it - and hence one of its  
names. Swellings, and Ulcers occur behind

the case - and hence ~~another~~ of its name.

I have once seen it epidemic in this city. It was in the year 1772. It ~~was~~ <sup>was</sup> proved fatal to many Children and to some Adults. I have <sup>since</sup> seen sporadic cases of it. A spontaneous lachrimation sometimes attends, and is always salutary. A matter is discharged from the nose as well as the throat so acrid as to inflame the nostrils and upper lips. I once saw death nearly induced by a large collection of matter in the nose which extended into the frontal sinus. There is sometimes a large swelling on the outside & anterior part of the throat.

The Remedies in its forming state should be an emetic, and gentle sweat.

Do these three forms of Ulcerous sore throat which have been described, ~~the~~ different diseases depending upon different specific remote causes? Dr. Boddam & Dr. Lebden <sup>have supported</sup> Dr. Withering and Dr. Gregory of ~~great~~ Boston the latter. They suppose they owe their variety in their symptoms, seat & mortality wholly to a difference of climate, seasons & constitution. I agree with them. The difference between those three forms of disease, is no greater than is observed in different climates, seasons & constitutions in the bilious fever. Like the different forms of typhus & various eruptions

They are all of domestic origin  
froms of bilious fever, they often blend  
themselves together, but like the  
bilious fever they appear to be different  
effects of one cause, and that cause  
always of a domestic & atmospherical  
nature.

V  
2  
2  
2  
0  
Int  
3

1 It is a disease of childhood chiefly, but it now & then affects Adults. I have seen 8 cases of it in young people in all of whom it terminated favourably - One in a woman of 70  
Worlsey 1809 Inst.

2 Its causes are 1 primary - cold and moist air ~~influence~~ - hence it is most common in moist & cold seasons & unknown in Edinburgh common in North Countries. I once saw it induced by a dash of water thrown accidentally upon a girl of five years old returning from School. I have lately seen induced in a lady by the fumes of white paint.

3 It is induced by causes w<sup>t</sup> act in a secondary manner. There are several other diseases ~~translates~~ to particular by the small pox - measles - all the forms of sore throat - aphæ - Rheumatism and Catarrh. The last is the most frequently induces it. In those cases in which it is said to be epidemic I believe it arises

✓ daily in some cases when when  
Am to & this will be.

✓ I have seen one instance in which  
it terminated fatally in consequence of  
a collapse.

wholly from Catarrh. This <sup>was</sup> ~~had been~~ the case during the present winter 1810.

- It is a higher grade of Influenza. It is most dangerous when it is the effect of a translated disease.

4. It is sometimes a symptom of disease from an worse wrongs & errors. I once saw a fatal case of it in a boy from overdistending his stomach with breakfast cakes. His lungs & wind pipe had been debilitated by a previous disease.

5. It ~~never~~ comes on gradually & suddenly & terminates in from one to 20 days. I have seen <sup>two</sup> chronic cases of it - one ended in a recovery - the other died on the 17<sup>th</sup> day. ~~too~~ I have heard of two other chronic cases of it in this city both of which ended fatally. It ~~is~~ <sup>is</sup> ~~dangerous~~

6v It is often attended with intermissions,  
and exacerbations. In these cases  
~~beginning of the bunching~~  
the ~~lungs~~ seems to be affected with  
the spasmodic form of Disease.

5. That it is generally, but not always attended with a frequent or tense pulse - now with other signs of ordinary fever.

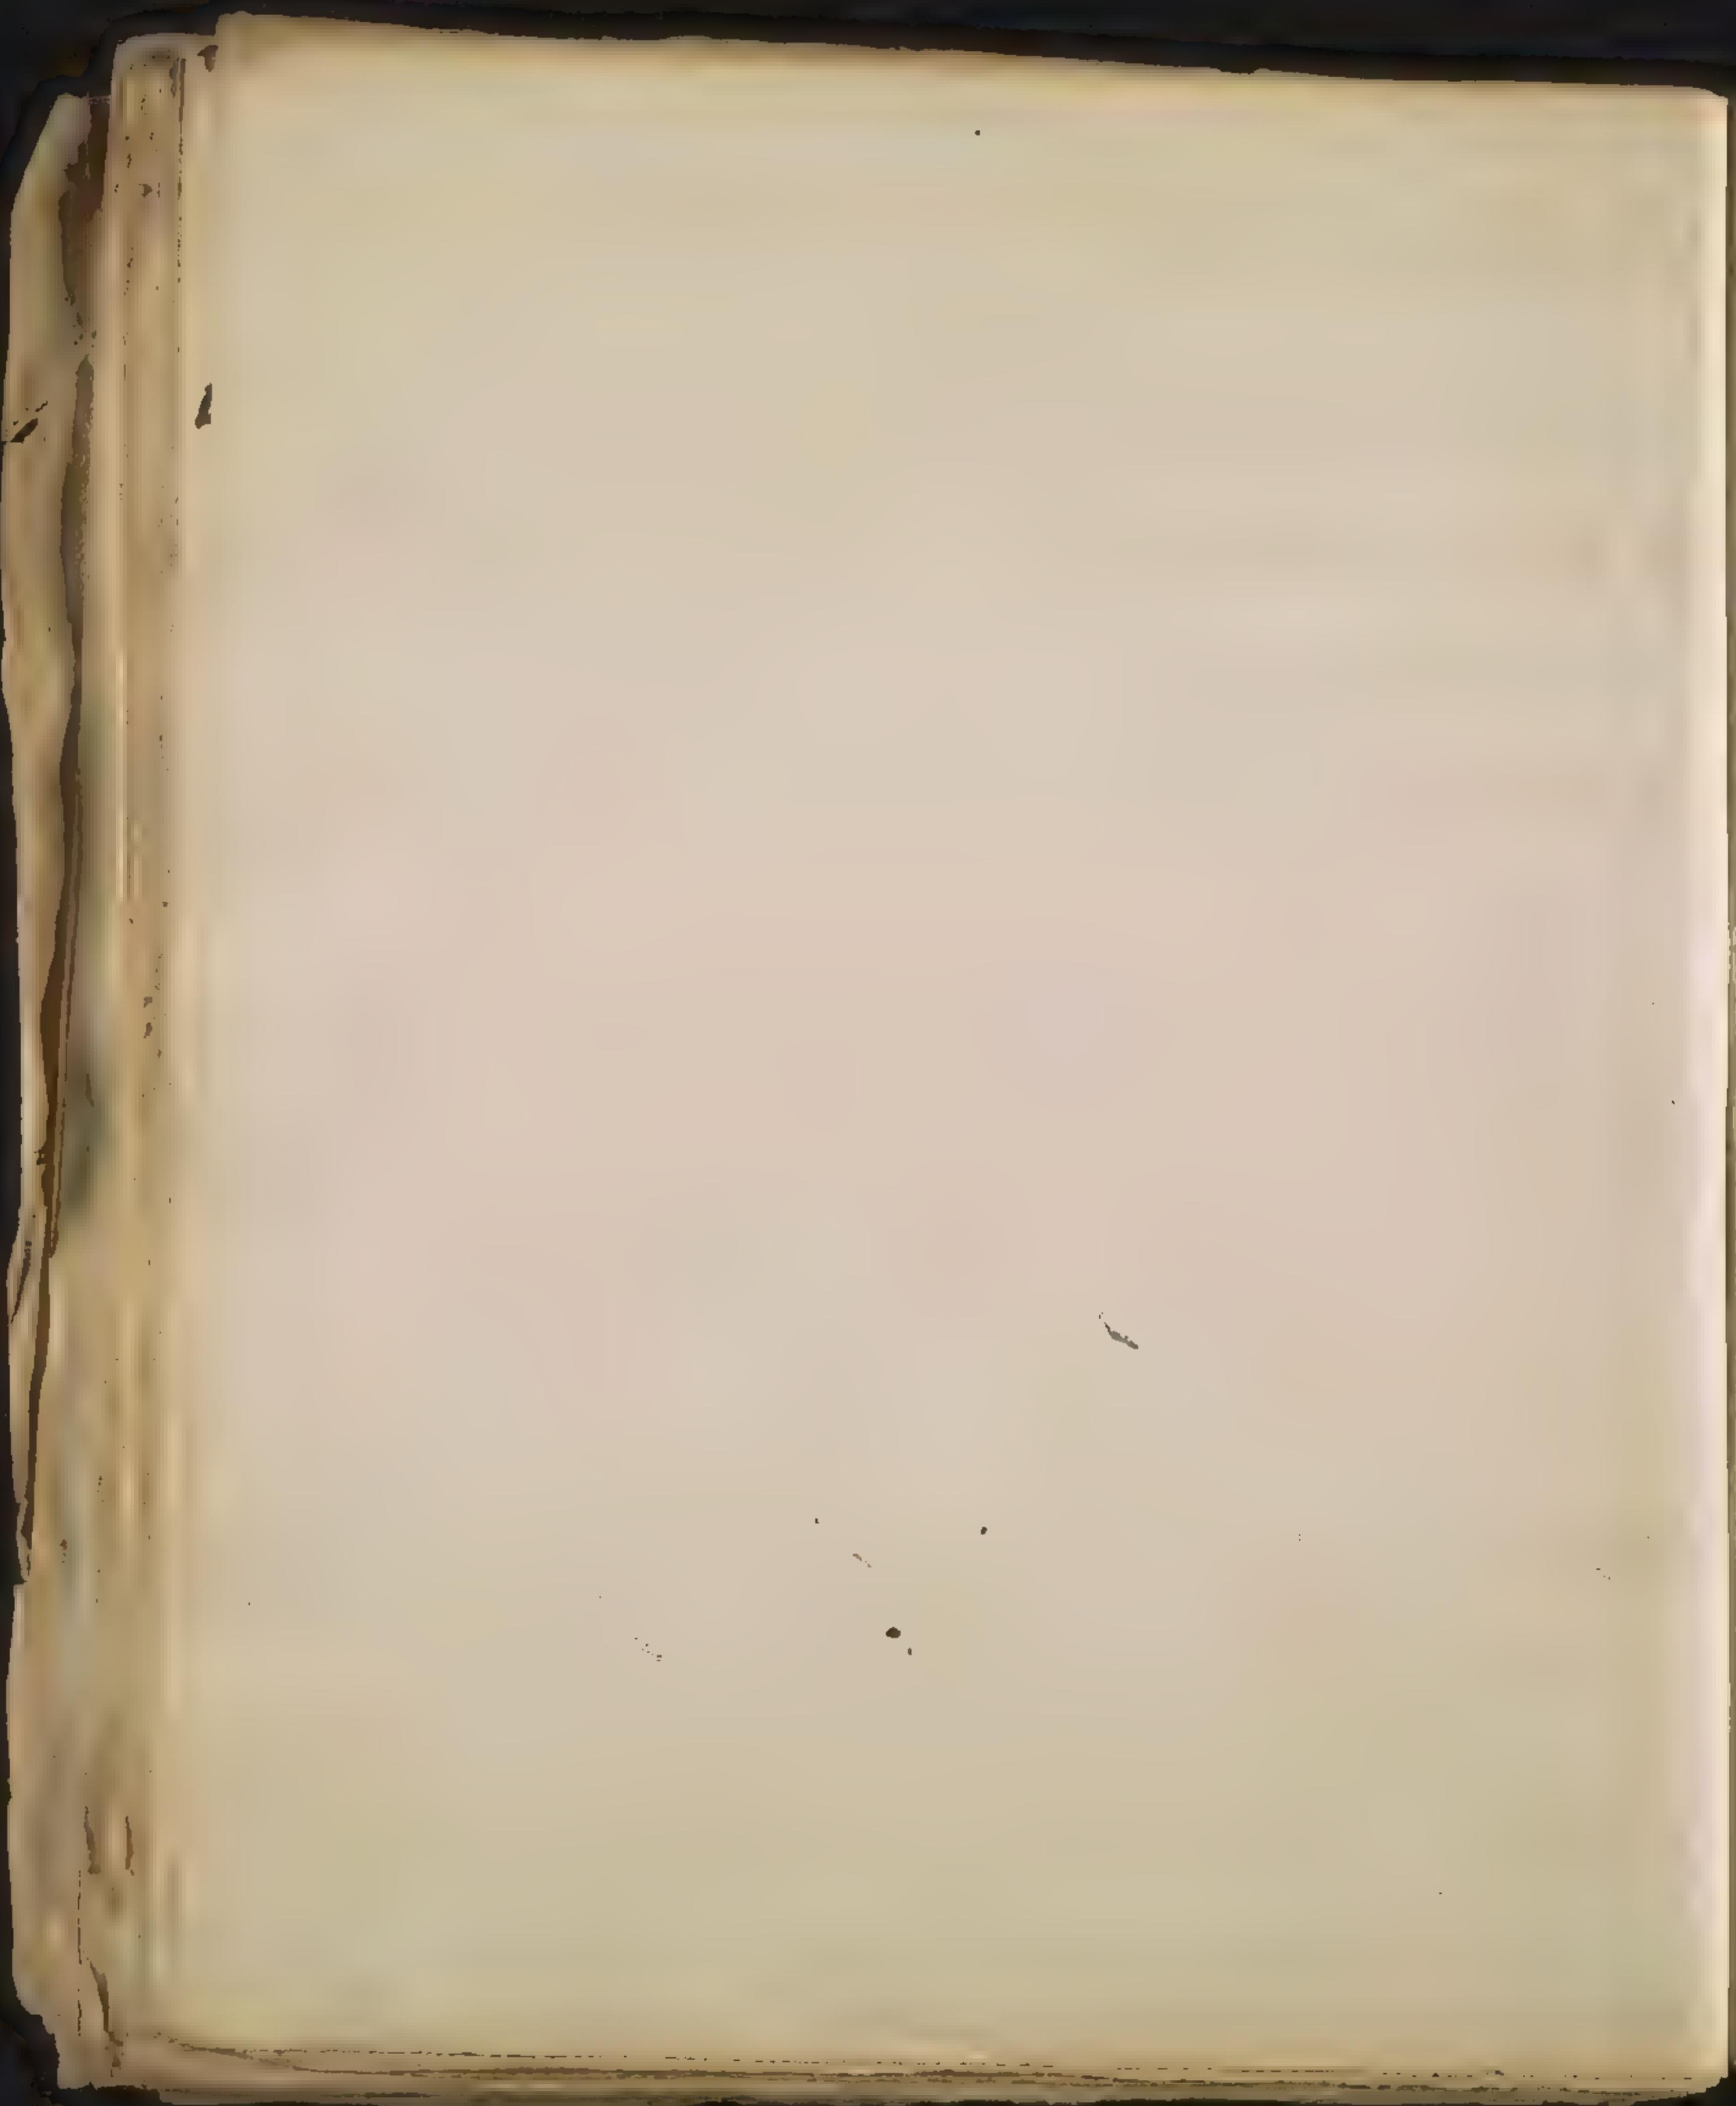

6. It is rarely attended with delirium. Dr Michaud says the mind is <sup>frequently</sup> elevated in it.

7. Children who have once had it, are subject to it for 5 or 6 years. I have known one instance of its being taken a dozen times.

8. It is sometimes a filial disease. Three and four of a family are now & then carried off by it in successive years in the same family.

10. Death sometimes occurs after an apparent recovery has taken place. It was seen after expectoration of mucus & fragments of a mucus membrane affording hopes & expectations of <sup>a</sup> recovery.

11. A diaphoresis is generally a fatal sign in it.

Dissections show us the following Appa-  
ratus : 1 no sign of disease of any kind,  
from morbid excitement transcending,  
inflamm<sup>n</sup>: ~~it is~~ <sup>Here, it is</sup> ~~it is~~ "dry disease".

2 Inflamed spots spread over the Trachea.

3 Some a liquid matter said to be serum,  
but - it is lymph not yet converted  
into membrane.

4 small Ulcers in the trachia. This is  
taken notice of by Dr. Cheyne.

5 a membrane of different degrees of density  
so similar to that which is formed ~~after~~  
in the brain - pleura & intestines after in-  
flammation pervading the larynx - trachia  
and bronchiae wholly or partially. This  
membrane by a chemical analysis ap-  
pears all the properties of the white of  
an egg. It is insoluble in cold, and

✓ It may perhaps add to our knowledge  
of this disease that two cases are upon  
record of dogs having died with it. A  
membrane formed from inflam<sup>ation</sup> was  
found in the trachea of each of them.

✓ It is to be presumed that  
~~the~~ all these symptoms usually come  
on in the night, ~~and~~ in course

hot water. It dissolves readily in a diluted alkali. By lamination, it yields a carbonate of soda, and a phosphate of lime.  
~~of Schmitz & post. of Janett~~

From its causes - symptoms and the effects as exhibited by dissection Dr Darwin has called it "a phthisy in the Trachea", and Dr Frank a "Trachitis".

Now proceed now to the cure of this disease. But first let us inquire has it any morbid signs? yes it has. They are heaviness & redness of the eyes - unusual dryness or dulness - a shortness with a little barking into and some hoarseness, & all with, & without fever. In this feeble & forming state of the disease, an extract of *Ipaeum* or *Quills* - or Tartar Grana with

✓ It is to be lamented that these  
premonitory signs of the disease too  
often come on in the night and  
hence they are not so often met with.  
by the remedies for that I have mentioned  
I used with so much success.

a few grains of Abornel 10dours fails to extinguish the disease in a few hours. If the Abornel fail of opening the bowels, a purge <sup>should</sup> be given afterwards. In this way, I have prevented the formation of this disease in many, perhaps in a hundred instances, - and at least a dozen times in <sup>my</sup> one of my own family, without the aid of any other remedies.

After the disease is formed - the remedies should be ~~so & so to~~

1 Bloodletting. This should be prompt and copious, or often repeated, in consequence of the part affected being so essential to life, and of its being from its <sup>out</sup> size & cartilaginous nature so much of the great

circulation. no age however young or fable should protect the disease from the lancet. Dr. Physick bled a child of <sup>three times</sup> but three months old in one day in with the happiest effects. ~~It prolonged its life.~~

2 Emetics. those when given this remedy is indicated by the sympathy which exists between the Stomach & the trachea 2 by children ~~in whom the syphilitic~~ bearing emetics so ~~well~~ <sup>my</sup> much better than grown people. and 3 by <sup>thier</sup> good effects. they often cure the disease when given in its early stage without the aid of any other remedy. the more prompt and active the emetics the better. Squirrels, and Lister emetics <sup>should</sup> ~~are~~

from wire

✓ lost thirty ounces of blood. —

be preferred for this purpose. Where they fail recourse should be had to the finger or a feather. I once saved the life of a lady in this city who appeared to be nearly expiring with this disease by exciting a vomiting by means of a feather thrust down her throat. All the common emetics had been given to her without effect. She had previously  
 the emetics should be repeated daily, and even two or three times a day in the course of the disease.

3 Pmgs. These should be calomel and jalap. Calomel should moreover be given in large doses in order to produce a counter action & secretion in the

ascribed the original use of this medicine  
✓ I have been aware of having claimed the original  
use of this remedy in the Cynanche Trachialis.  
This is not true. <sup>Latent</sup> - Steaming wood lying green are not ~~among~~ <sup>in the</sup> the Cynanche Trachialis to dr the Bond an  
inches of any Villa. In the 398 page of  
the 4<sup>th</sup> Volume of my Virginia <sup>in the</sup> ~~good book~~  
find the following ~~expressions~~ <sup>words</sup>. To Dr Tho:  
Bond, of the City of Philada is indebted for  
the general introduction of memory into  
general use in the practice of medicine.  
He called it "a restorative remedy" &  
prescribed it in all the diseases which re-  
sisted the common modes of practice.  
He gave <sup>it</sup> liberally in the Cynanche tra-  
chialis. I have put up many hundred  
doses of it by order of my preceptor in medicine  
who between the years 1760 & 1766 & ~~the~~  
learned the use of it from Dr Bond. I  
adopted it from them.

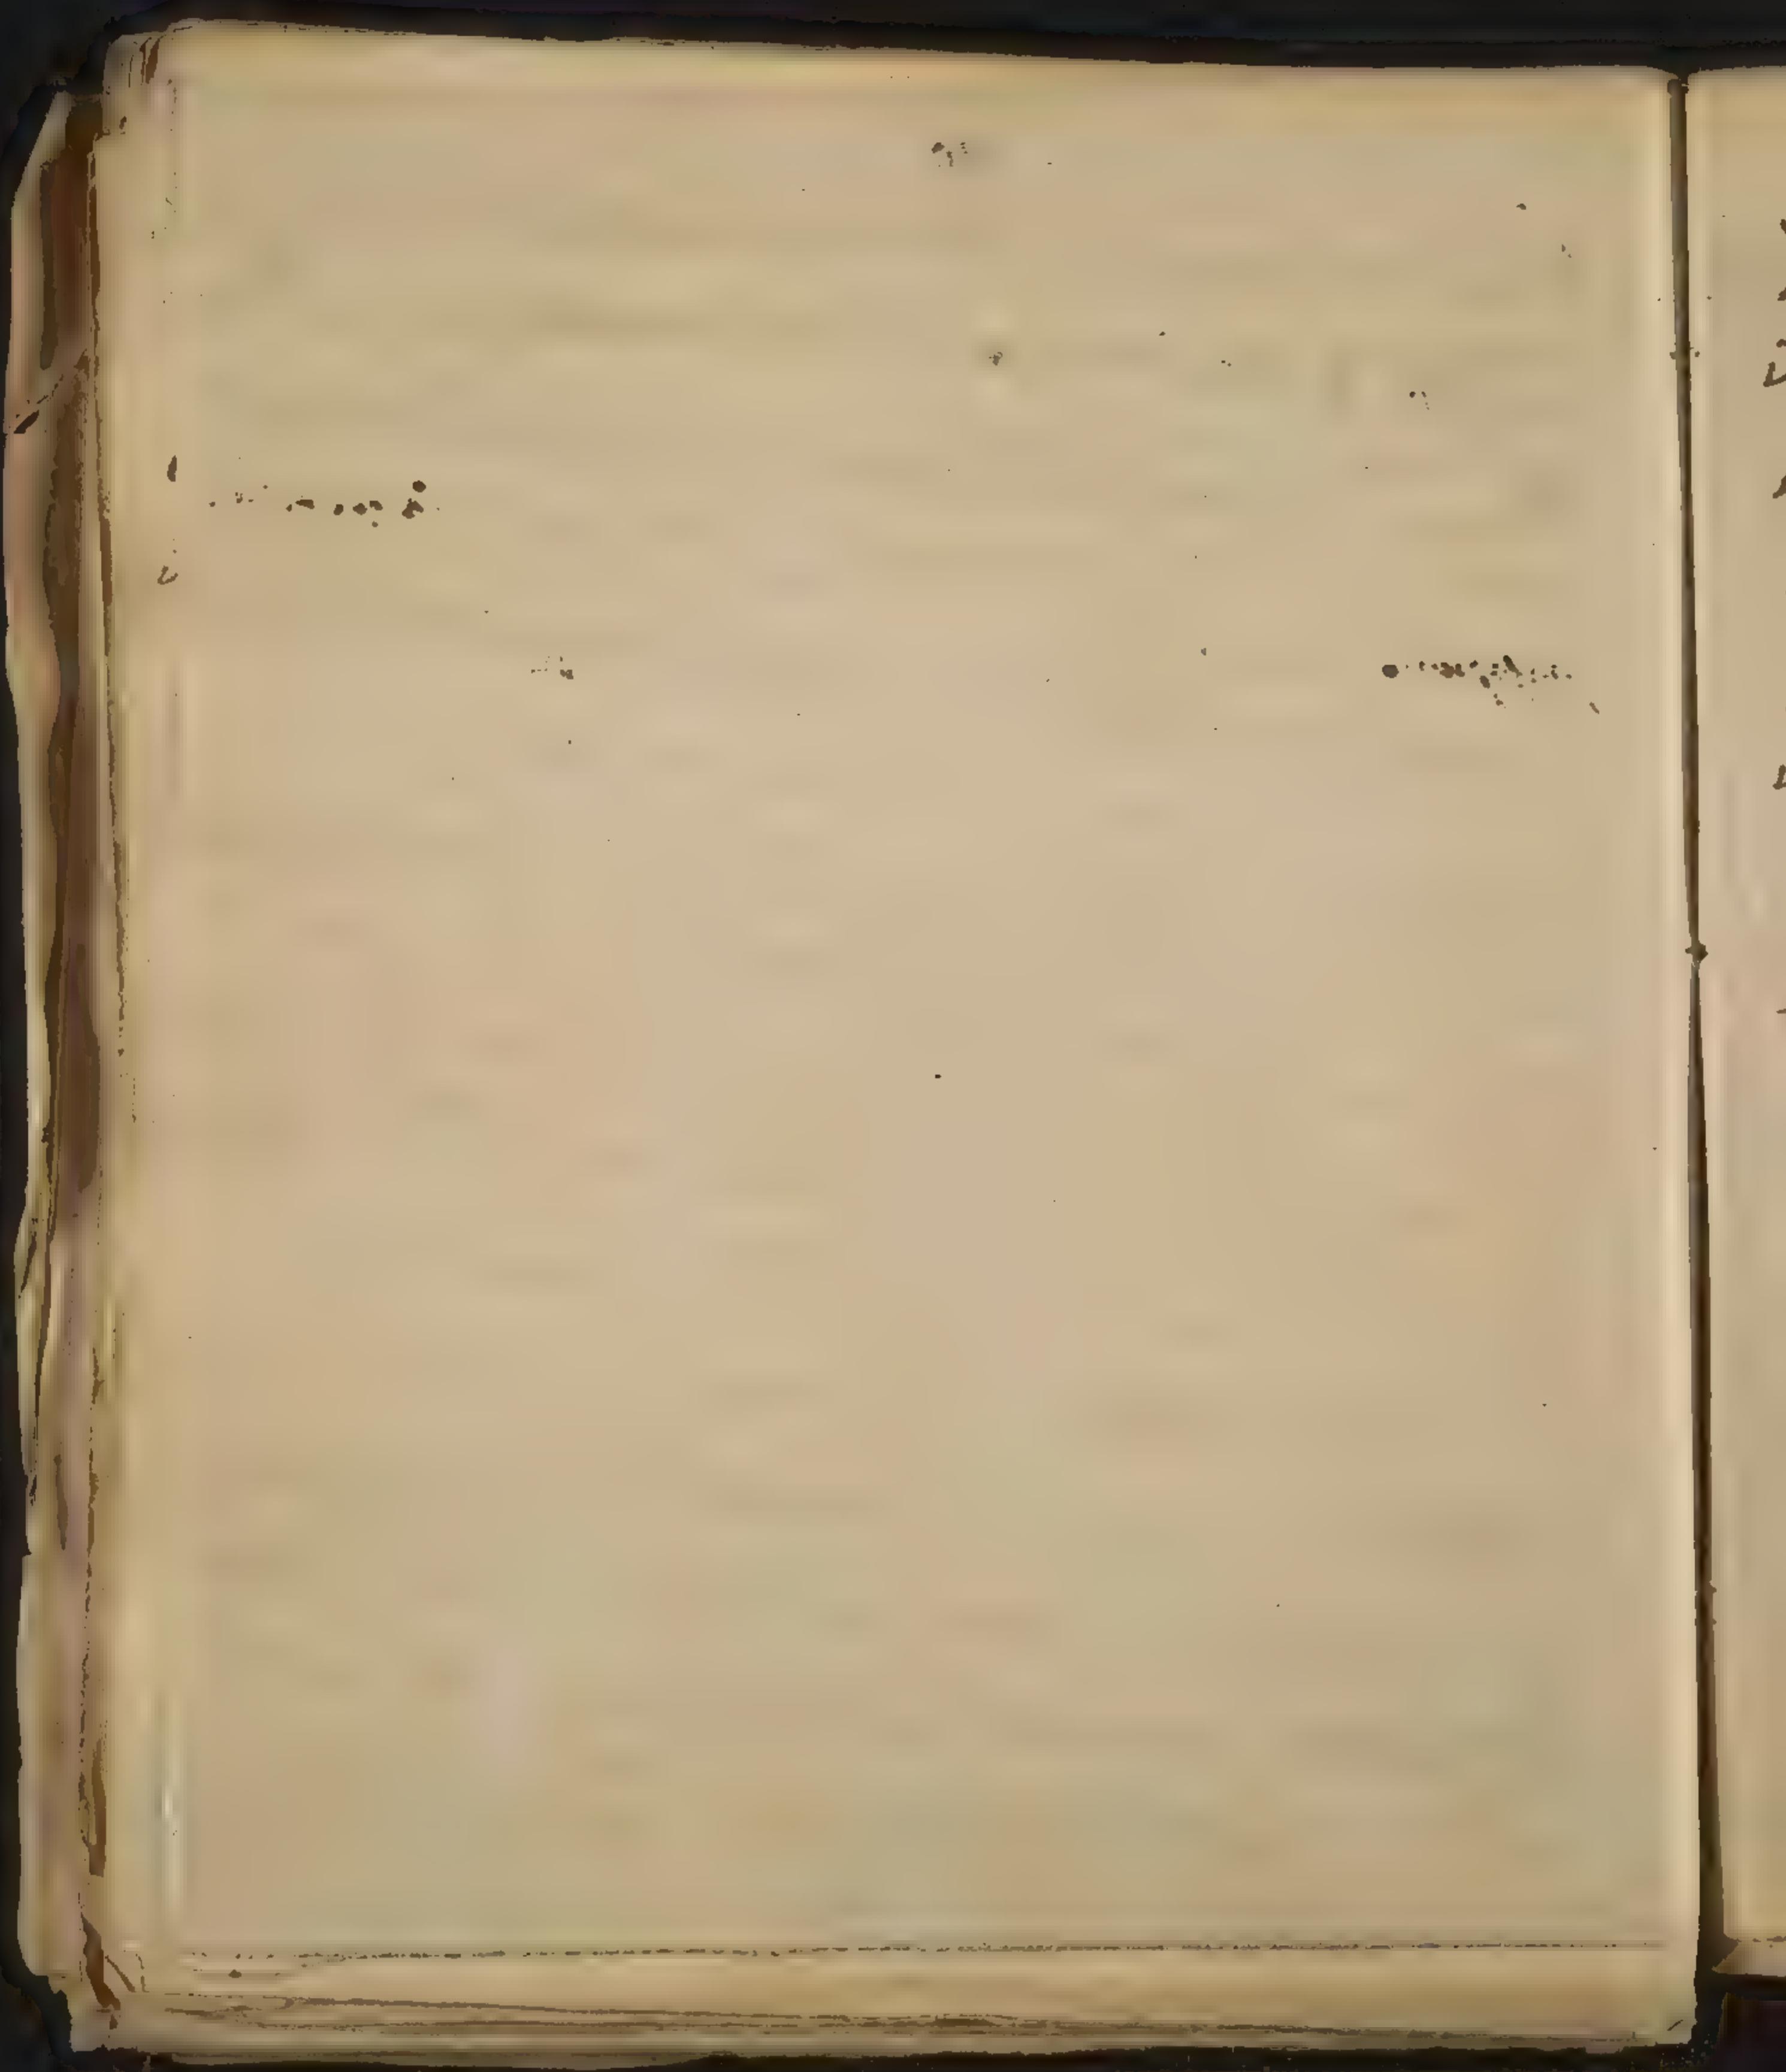

29

Stomach and bowels - no age is too young  
or too feeble to forbid this medicine. Dr  
Physick gave half a dram in divided  
doses to the child I have just now men-  
tioned in this course of <sup>day</sup> one, & thereby  
aided bluding in saving its life. — ✓

4 Blisters should be applied to the throat,  
but in cases which tend rapidly to  
death a resolution may be made from  
the inside to the outside of the throat  
by means of the flour of mustard.

5 ~~the~~ Stimulating cataplasms to the feet.

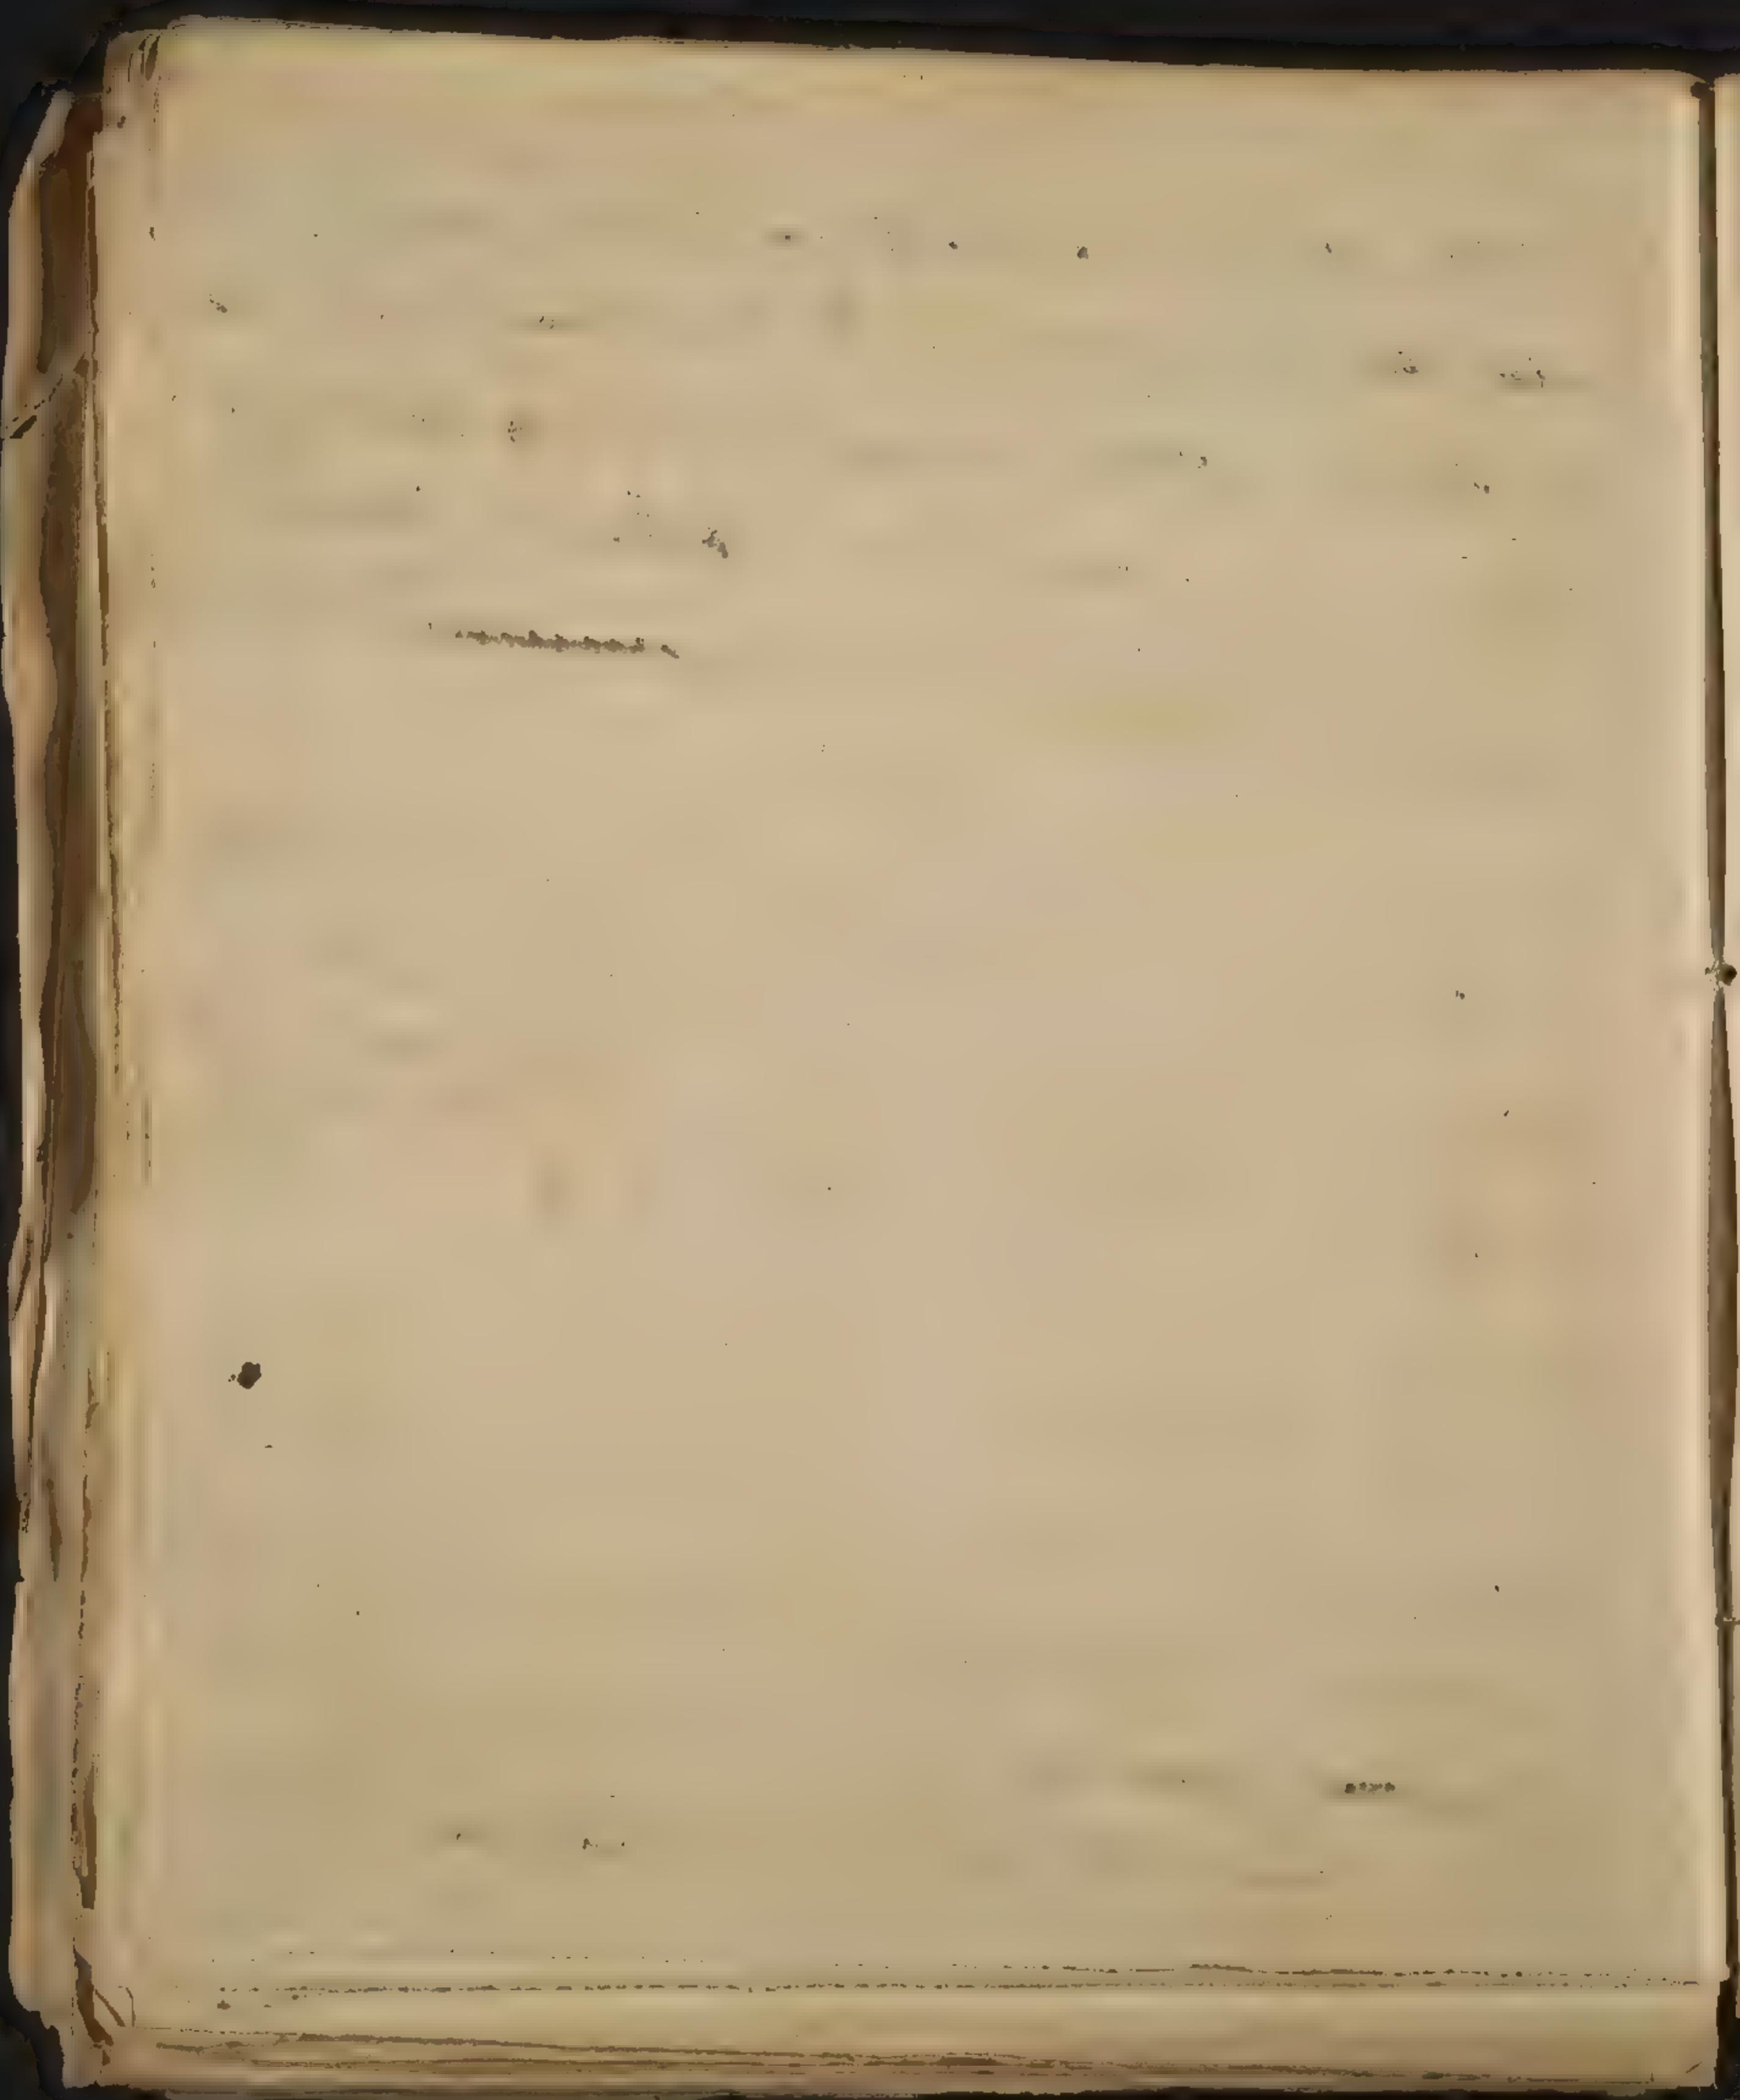

6 The peridurium and warm bath. They  
both determine to the skin and thus  
relieve the windpipe.

30

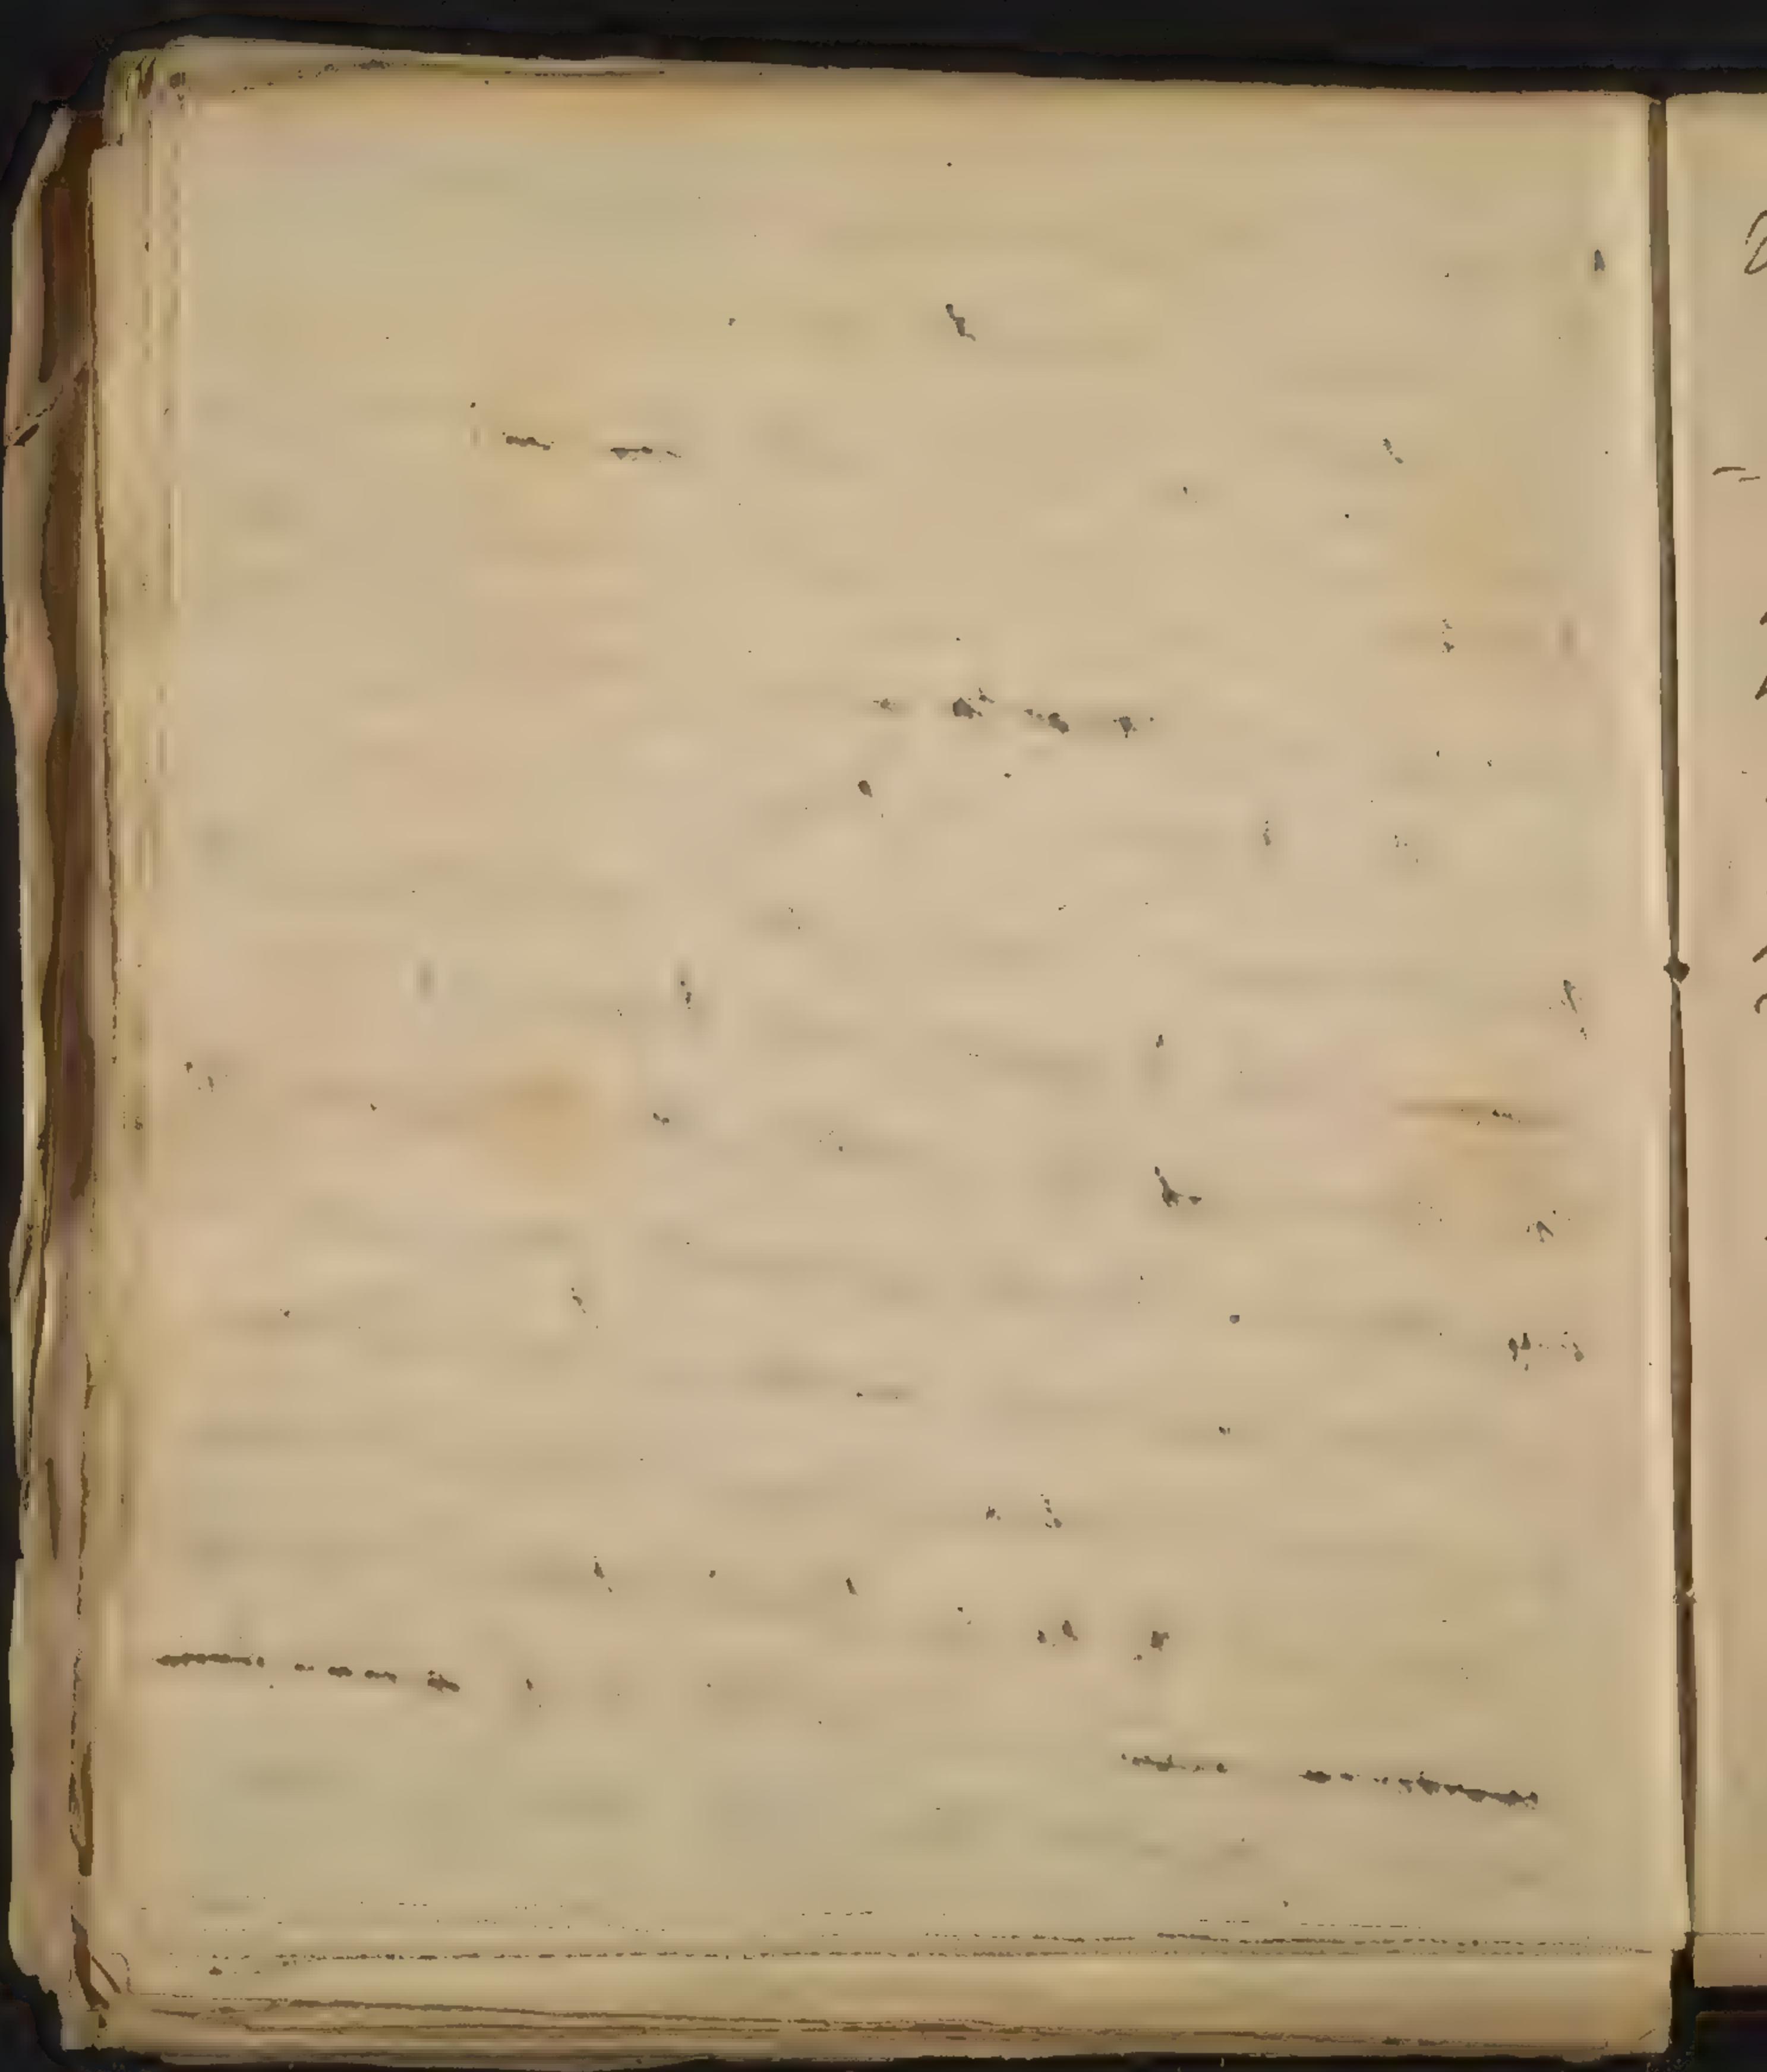

7 The Vapor of boiling water conveyed into the trachea. Dr Monroe commends the Vapor obtained by pouring boiling water upon capsicum - that is Cayenne pepper. A note Air has once <sup>done service</sup> ~~occurred~~ when inhaled into the lungs.

8 Liquid Iodine. For the Croup I have found -modi form of this disease I have found this remedy very useful. It ~~was~~ <sup>is</sup> used with it with great advantage in the case of Cynanche trachealis brought on by the Odor emitted from white lead paint. It was aided in its effects by previous bleeding - Spirit of Hartshorn and the external applications of mustard <sup>ingassipious</sup> to the throat & feet. The ~~was~~ <sup>is</sup> the

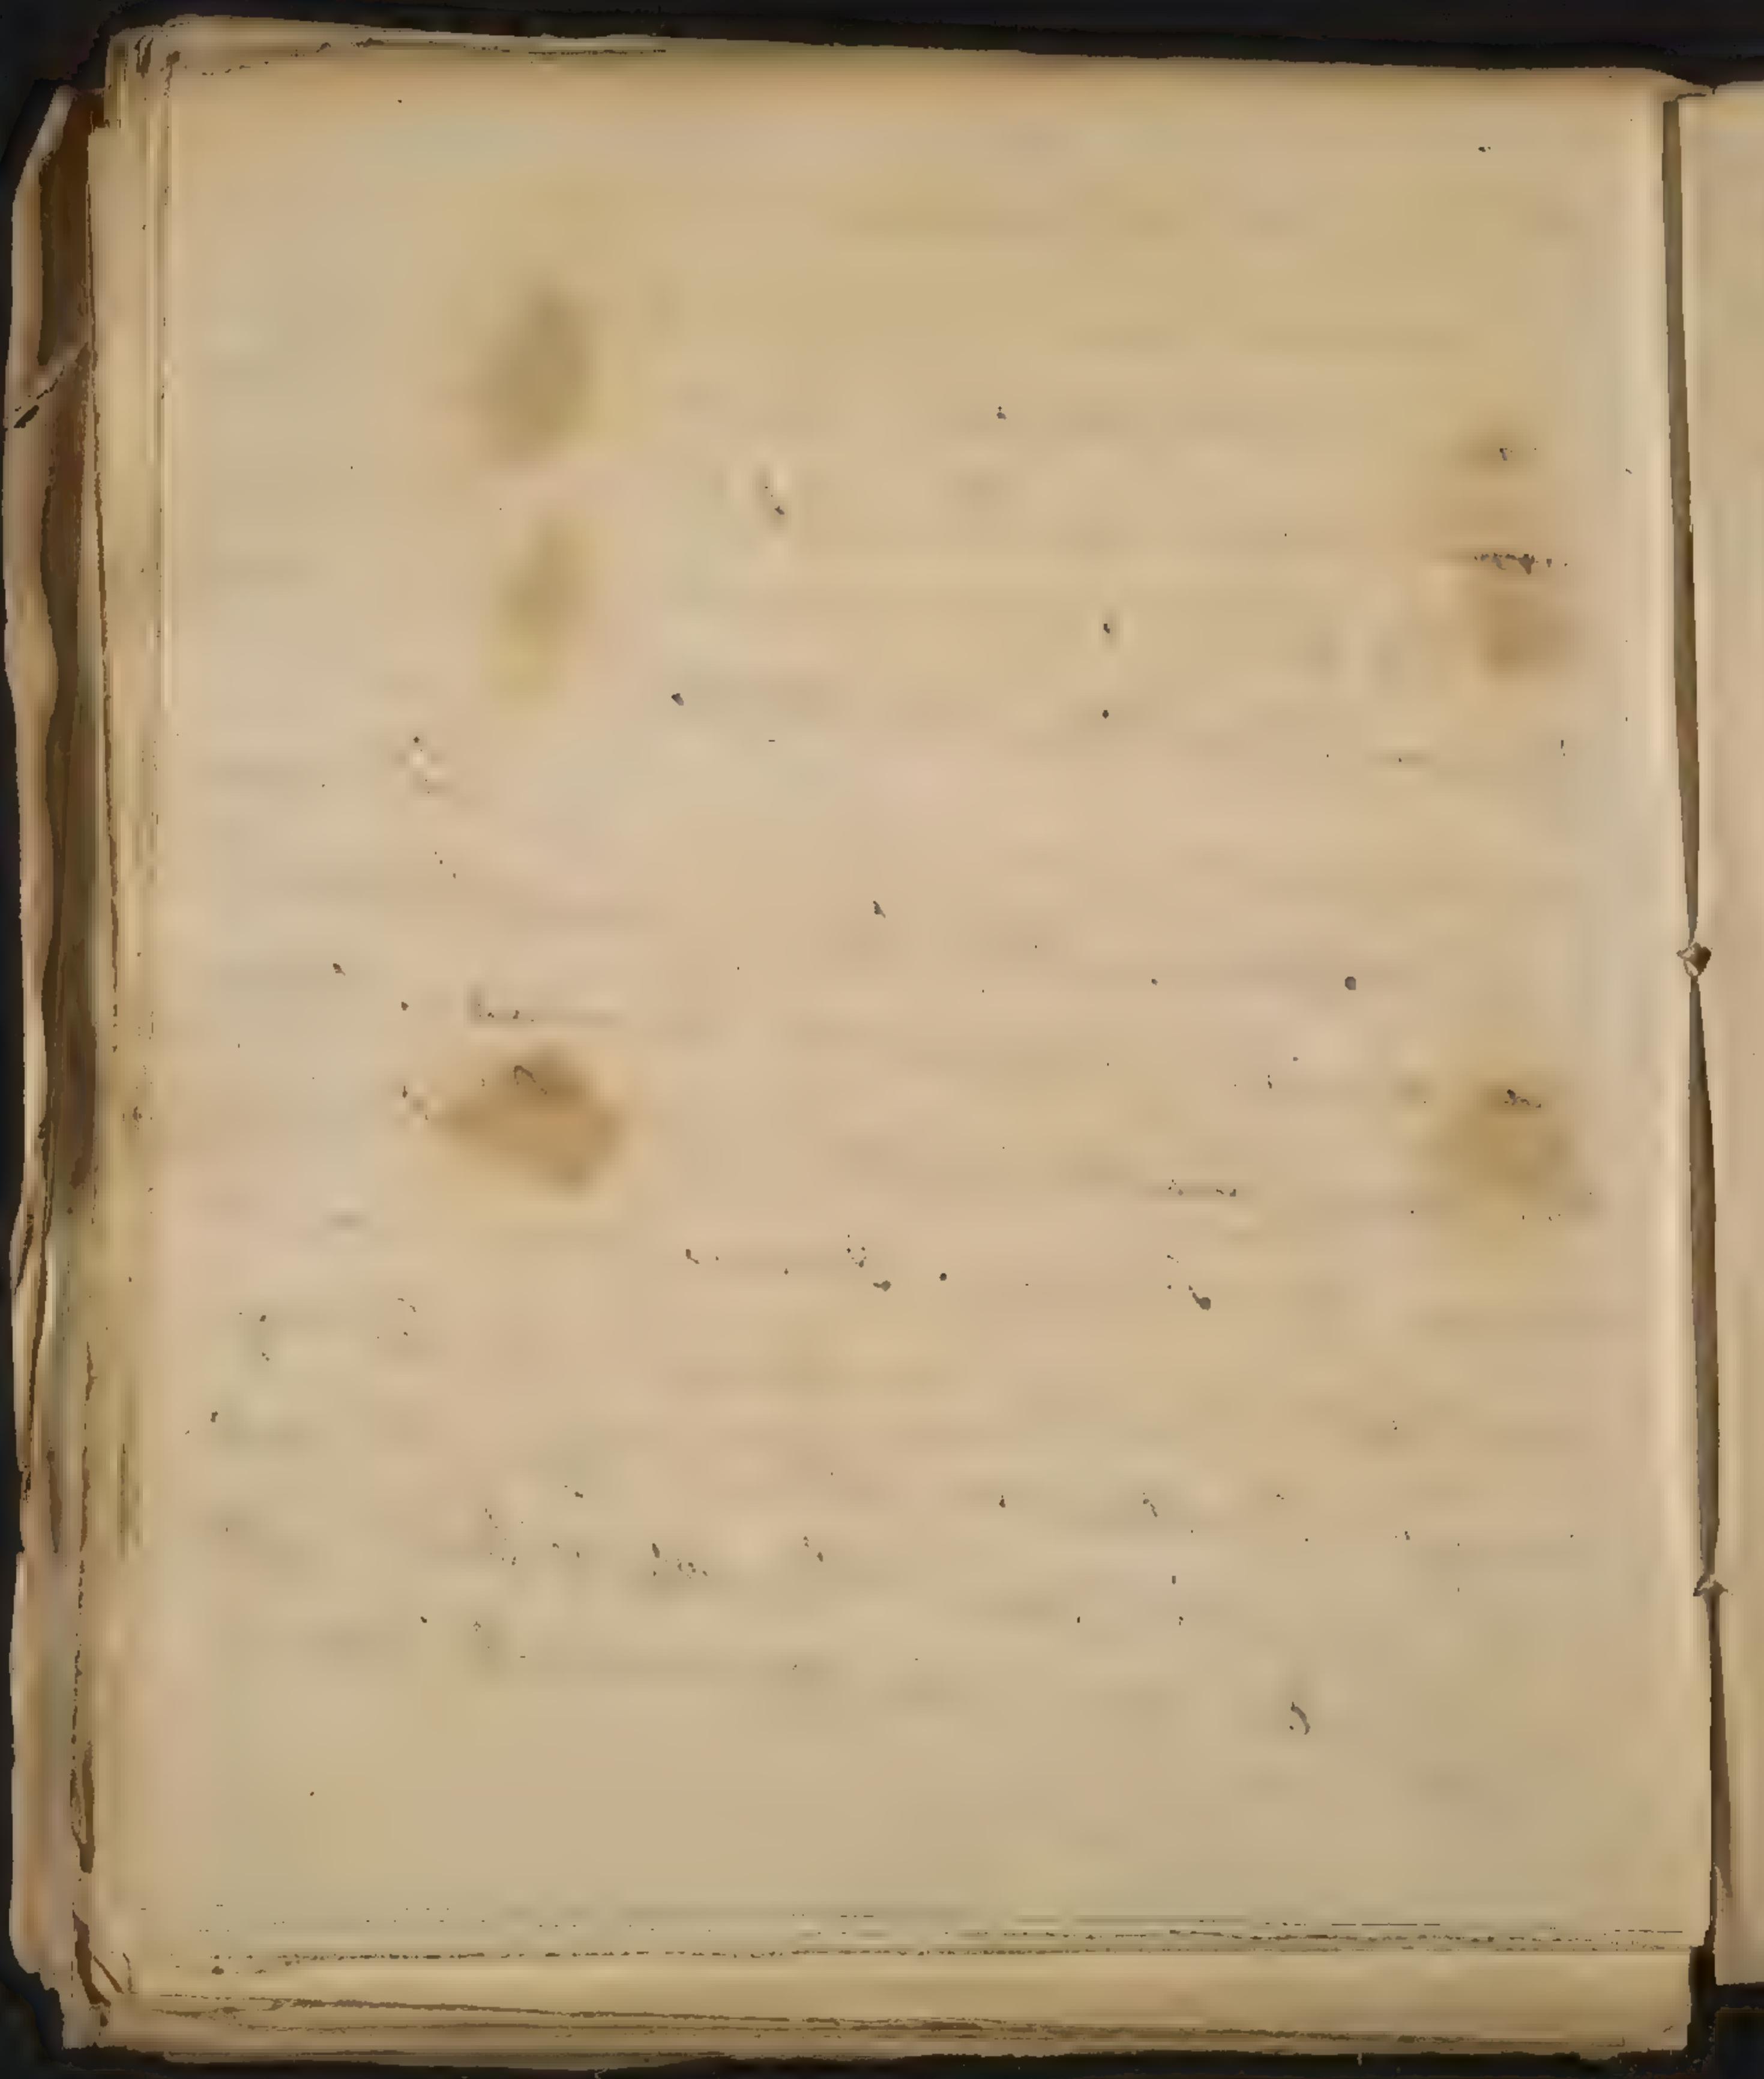

disease in this case was attended with  
complete intermissions.

I my <sup>late</sup> excellent friend & former Clapmate  
Dr Archon of many land introduced the  
use of the Podophyllum Seneca Snakeroot  
in this disease. A strong infusion of it  
pukes, and a weaker one certainly acts  
upon the diseased parts disposing them  
to throw off the matters that are suited  
by them. Combined with other medicines  
it ~~was~~ has been useful, but I fear  
an undue reliance upon it to the ex-  
clusion of early bleeding & emetics, has  
~~wanted~~ ~~year~~ rendered the wit, ~~it has done~~  
much greater than the good it has

Dane in this Disease. <sup>32</sup>

The history has been augmented  
- and in this disease. In its <sup>infant</sup> ~~infant~~  
form it may be useful by depletion,  
and by creating a fever and an external  
disease. In this way Dr. Dosey cured a  
young woman in this city. She was  
relived from the loss of blood before  
the knife reached the trachea. After  
the membrane is formed, I believe it  
never did service. I saw it employed  
without success in the grand tour of  
Major Butler on the 2<sup>nd</sup> of Jan<sup>y</sup> 1810.  
He rallied from the loss of blood a few  
minutes, but soon afterwards died.

I once attended a man from Virginia, of the name of Bampfield, who, after an attack of this disease, was much distressed with the stertorous breathing and cough which belong to it. I suspected both to arise from a membrane formed by

inflammation in his trachea. This membrane I supposed to be in part detached from the trachea, from the rattling noise which attended his breathing. He had used many remedies for it to no purpose. I advised a salivation, which in less than three weeks perfectly cured him.

The cynanche trachealis is attended with most danger, when the patient labours under a *constant* and audible stertorous breathing. The danger is less, when a dry stertorous cough attends, with *easy* respiration in its intervals. The danger is nearly over, when the cough, though stertorous, is *loose*, and accompanied with a *discharge* of mucus from the trachea. //

An eruption of little red blotches, which frequently appears and disappears two or three times in the course of this disease, is always a favourable symptom.

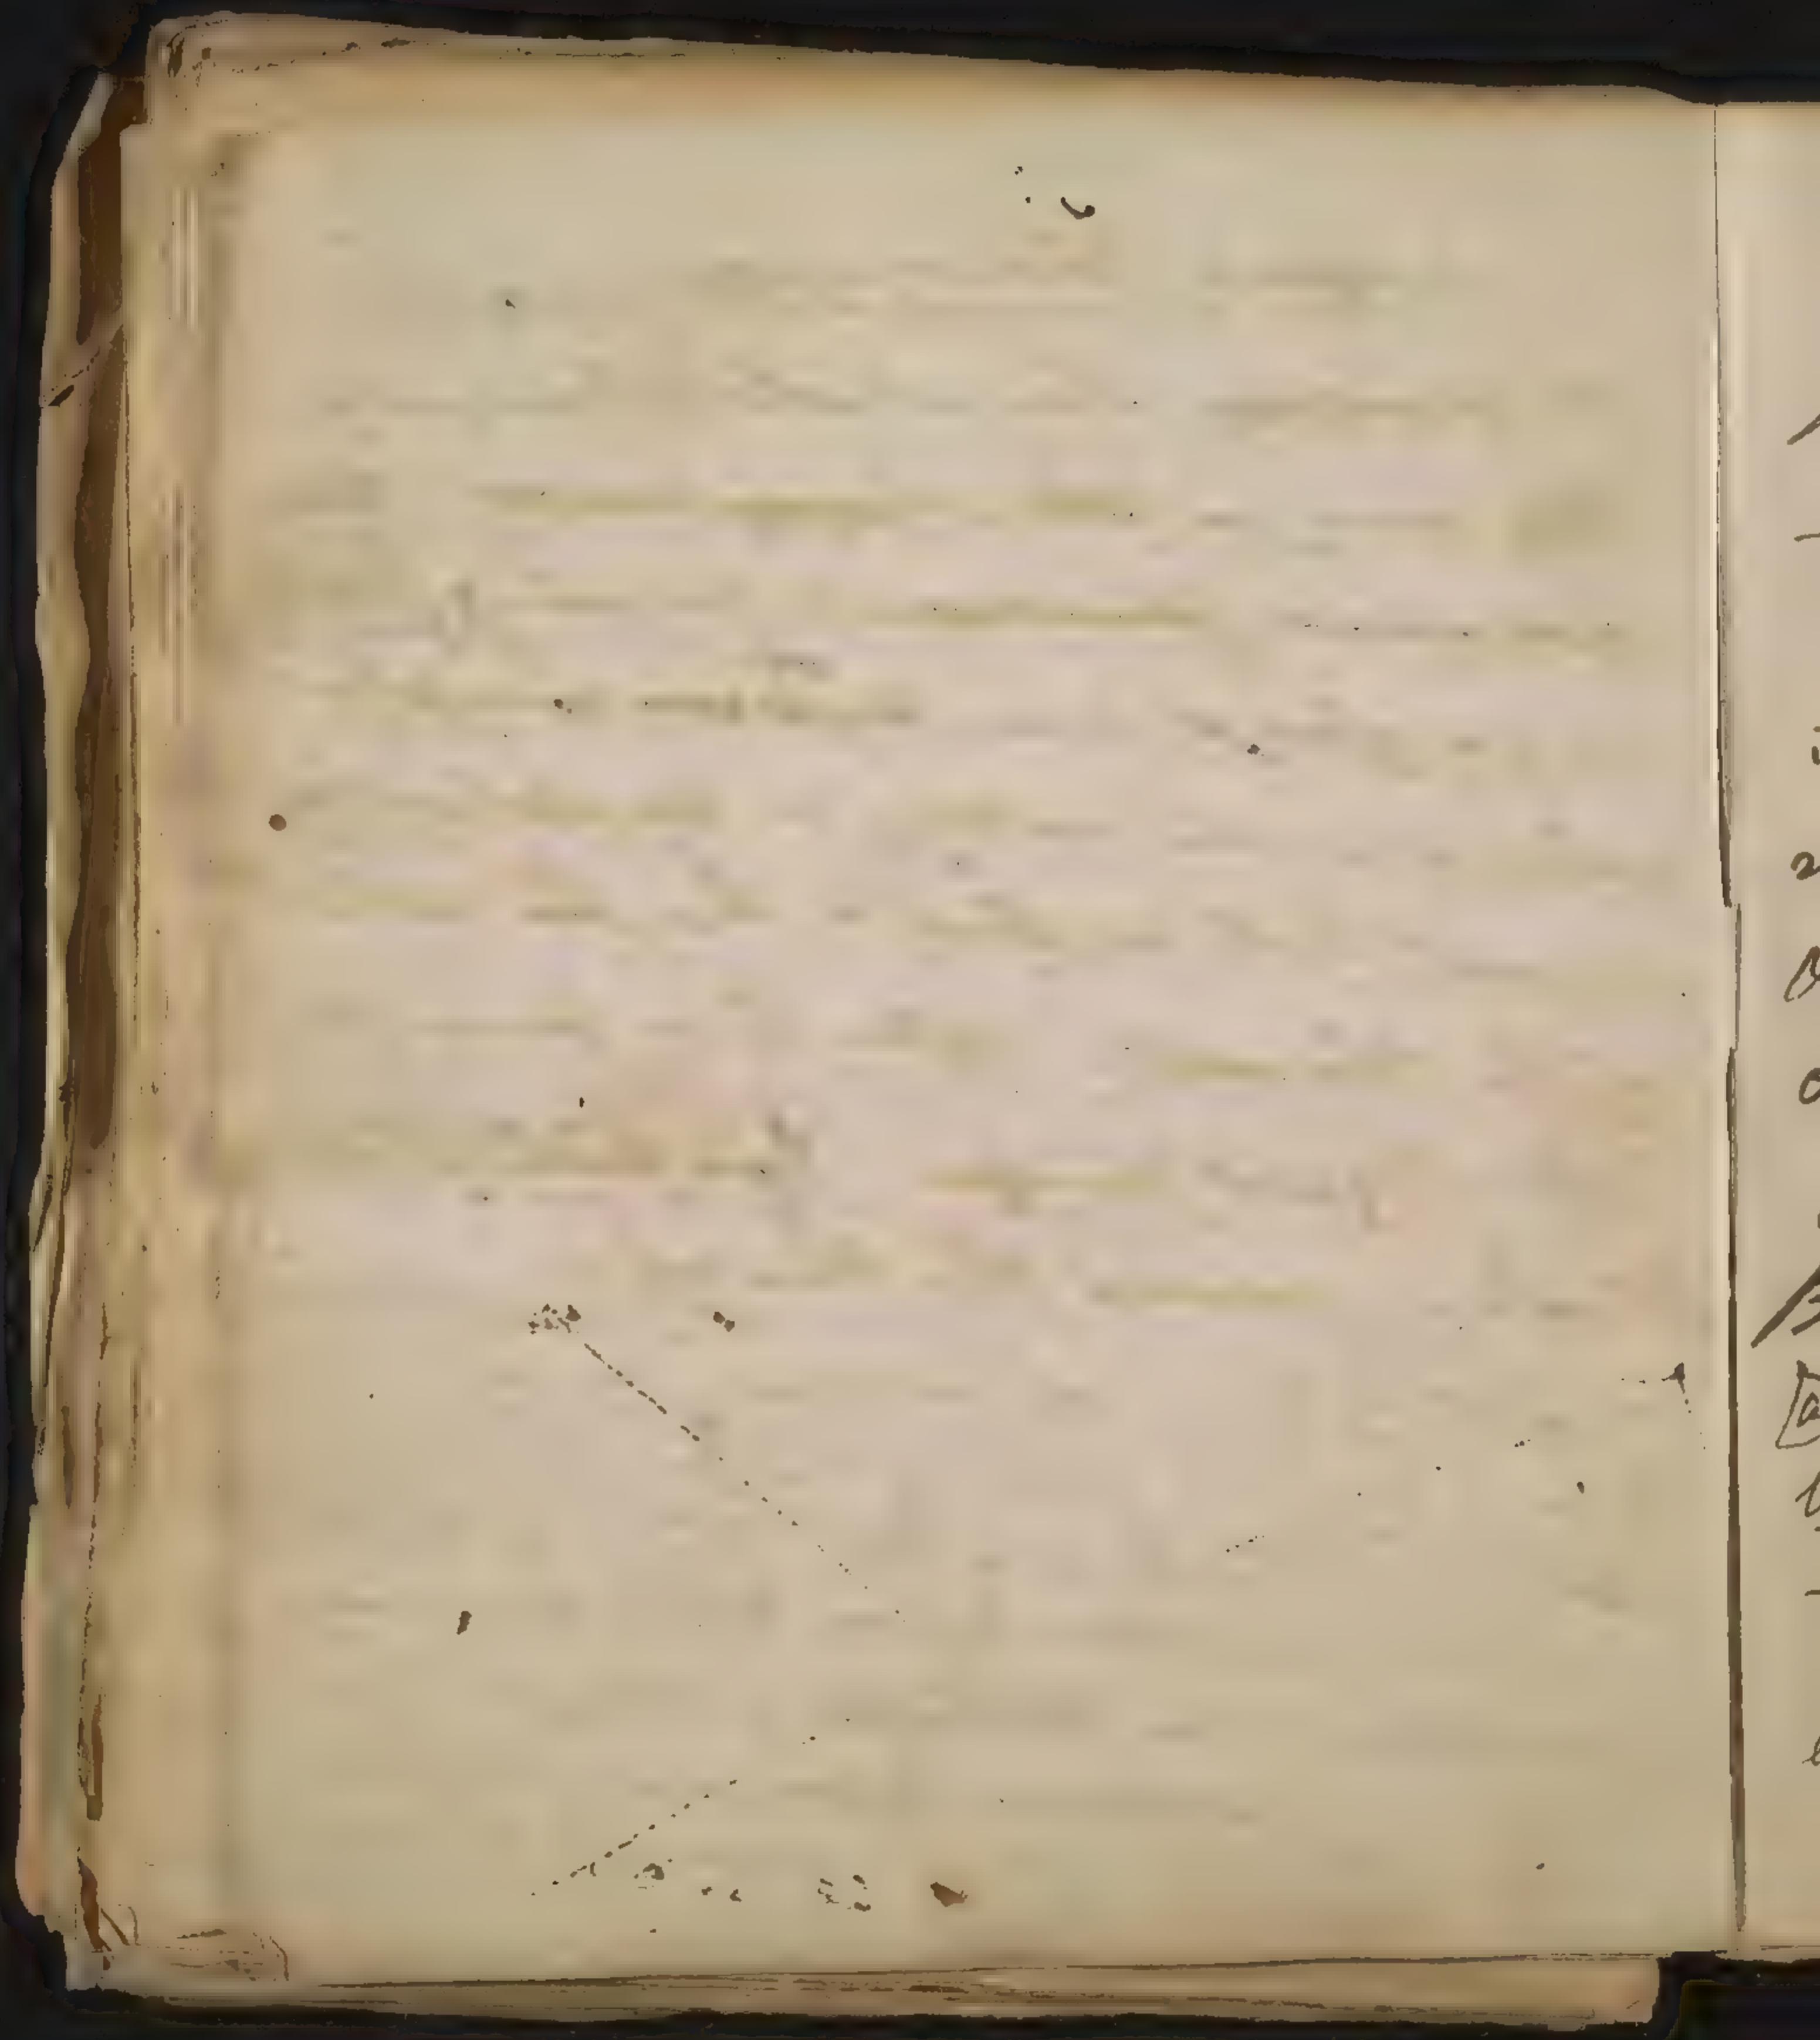

It is generally fatal when it succeeds other diseases, and when it appears in a chronic form. —

The rumps called Angina  
Parotidea.

A Disease common to young people seated chiefly in the parotid glands. It yields to low diet & gentle purging. Sometimes it falls into the testicles in men, & into the breasts in women.

Is it possible the swelling in the testicle is again translated to the brain where it kills. It sometimes destroys the <sup>testicle</sup> ~~testicle~~ with removing it away. It is prevented by a Blisters to the throat as soon as the swelling makes its appearance ~~in the~~ <sup>in it</sup> throat, It also prevents its translation to the brain when applied to the testicles. It has prevailed a good deal this winter <sup>of</sup> 1804. 5 - & sometimes required us: - rapidly cured suddenly by leeches.

### Angina pharyngea.

It occupies the whole pharynx.

- Its cure is ~~of~~ liquid prunes - low diet & Blisters on its forming state  
is gargles of Brandy ~~or~~ <sup>or</sup> Wine simple or  
mixed with water, & Hartshorn  
& Sweet Oil applied to the ~~th~~ outside  
of the throat. After it is formed,  
Vs. liquid prunes - low diet, &  
Blisters around the throat.

~~Are~~ the 3 forms of sore throat <sup>which are</sup> ~~which are~~  
~~Ulcers only~~ higher grades of this form of Angina?  
- ~~veral~~ ~~veral~~ Analogies of other forms of fever  
make this probable. I. G. The bilious fever, may  
even the phthisy, in their highest grades put on  
malignant & dangerous appearances. The thin  
covering of the throat - perhaps ~~disposes it to Ulcers~~  
more than other parts of the body when ~~it is~~ inflamed.

xx.

+ but without affording any relief. Disputed  
with Dr. Bowes Dr. in Capt. Barney's Case. It  
generally affects Adults, & even more than  
Women, and even of robust constitutions,  
more than ~~years~~ of age are of weakly.

It thus cured in many Cases in 80<sup>2</sup> days.

✓ This disease prevails among horses  
by the name of the Strangles. Dr. White  
says it is always hurtful in it. It  
passes over itself by suppuration.

Angina tonsillaris

This disease is seated in the tonsils &  
as they are of a soft & spongy nature, they  
favour its rapid course. The facility of  
liquid effusion in them, the formation  
of pus in so rapid manner that we  
sometimes the tonsils break into little Ulcers & I formerly  
are seldom able to prevent it. I have  
bled in it, but failing of resolving the  
inflamm<sup>n</sup>: by it I have desisted from using  
it except where there is danger of Suffo-  
- After suppuration has begun, it  
protracts the its breaking. The lop of  
a few teaspoonfuls of blood by a puncture  
in the tonsils gives more relief than 344  
from the Acon. gentle purges & low  
ditt are proper. When it is ripe, it may  
be opened with another iron armed lancet,

or broken by any <sup>2d</sup> <sup>37.</sup> other means. Dr  
Randalls method. Bronchotomy.

It is very apt to recur in persons  
who have once had it. Its prophylaxis  
consists in avoiding all its exciting  
such as full diet - vegetation,  
causes especially cold feet. wearing  
wool in the cars, is said to be good.

It prevented it 18 months in a patient  
of mine Mr Brown. It <sup>returned</sup> on laying it aside.  
It has likewise been prevented by smoking tobacco.  
It is said to be connected with liver complaint.  
- when it is - they should be removed by  
the medicines for them, to be mentioned  
hereafter.

~~as the best form of treatment~~
